Blake's Rocket Pitch

Blake is going to a data science careers fairs to network with potential employers. They have prepared personal rocket pitches about themselves to highlight their skills. See below for her first attempt.

First Attempt

My name's Blake and I'm a student of Applied Mathematics at Imperial College London, where I hope to complete my project in machine learning for data science. I'm developing technical abilities with R as the analysis platform and Python programming. I believe my problem-solving skills and adaptability would make me a valuable potential employee.

After getting some feedback Blake re-wrote her pitch

Second Attempt

Hi. My name's Blake and I'm a **Master's** student studying Applied Mathematics at Imperial College London. I'd really like to combine my **interest in machine learning and data science** and I'm hoping to do my project in this area. I'm developing technical abilities in R and Python through the modules I've chosen, and I've recently completed an assessment where I **wrote a short programme to clean up a large data set** relating to my supervisor's research in how humans interact with specific computer programmes.

I enjoy problem solving and particularly enjoyed being part of the **International Data Analysis Olympiad team last year,** where I learnt the importance of effective communication.

Could you tell me more about the types of projects your company works on please?
